Detailed Description Text - DETX:

In another embodiment, the polymerization step can take
place in the presence
of a pore inducer. The pore inducers of the present
invention allow

polymerization to take place without substantially reducing the porosity of the solid support. Suitable pore inducers, also referred to as porogens, used in the present invention include, but are not limited to, polyethylene glycols, polyoxyethylenes, polysaccharides such as dextran and polar solvents. Polar solvents include those commonly used in chemical synthesis or polymer chemistry and known to those skilled in the art. Suitable polar solvents include alcohols, ketones, tetrahydrofuran, dimethylformamide, and dimethylsulfoxide. Preferred polar solvents are ethanol, methanol, dioxane, and dimethylsulfoxide.
